Market Scope

Our proprietary disease models offer extensive country-level prevalence data for various ophthalmic diseases and conditions by age group.

All countries with a population over a million are modeled for your own analyses.

Disease Models

Our proprietary global disease models take into consideration the latest clinical research and demographic projections on a global scale and can be customized by geography and disease category to meet clients' diverse needs. Disease models can be used to evaluate target markets for clinical-stage and commercial-stage products and gain insights into the volume and demographics of diseased populations.

Current offerings include country-level analysis and projections for:

Retinal Conditions:
RVO, AMD, DME, and others

Refractive Error Distribution:
myopia, hyperopia, cylinder, and presbyopia

Dry Eye:
patients with signs and symptoms

Glaucoma:
OH, OAG, ACG, secondary glaucoma

Cornea:
